

## iOS developer task assignment

1. Choose some free API, e.g.: <https://github.com/toddmotto/public-apis>
2. Create public git repository and upload your code frequently during app development
3. Implement native iOS app
  - Follow apple design guidelines:  
<https://developer.apple.com/design/human-interface-guidelines/ios/overview/themes/>  
<https://developer.apple.com/design/resources/>
  - Display data from API in application in form of at least one list and one detail
  - Take future growth into consideration, e.g. multiple item types in table/collection View

### Required usage:

- UIKit and Swift
- Dependency injections

### Optional usage:

- Coordinators
- Combine
- SPM/CocoaPods
